In the last few years, 1-indanone derivatives and their structural analogues have been widely used in medicine, agriculture and in natural products synthesis^[1-3]. Extensive studies on bioactivity of 1-indanone derivatives open up more and more new possibilities of their applications as antiviral and antibacterial agents^[4], anticancer drugs^[5], pharmaceuticals used in the Alzheimer's disease treatment cardiovascular drugs^[6], insecticides, fungicides, herbicides^[7] and non-nucleoside, low molecular drugs for the hepatitis C treatment, which inhibit HCV replication^[8,9].

Donepezil

Flosulide

CGP-28237

IAA-94

Epipterosin L

Indacrinone

A series of medicinal products containing a 1-indanone skeleton
has been firmly incorporated in medical practice.
