Azetidines are an important class of aza-heterocyclic compounds with remarkable biological activities, which makes them an interesting scaffold in the field of medicinal chemistry^[1]. In recent years, structure-activity studies of many drugs or bioactive compounds have shown that the azetidine ring has a wide range of applications as a pharmacological tool. Moreover, the number of recent manuscripts gives evidence of the large use of this ring system in the synthesis of bioactive compounds^[2-6].

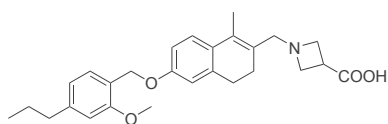

PAD

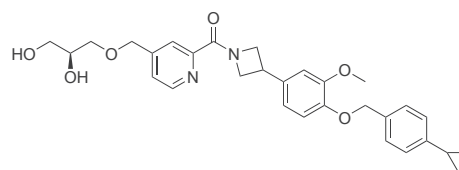

NAMPT inhibitor

MAGL inhibitor

Ceralifimod, ONO-4641

JTE-952

A series of medicinal products containing azetidine
has been firmly incorporated in medical practice.
