

NATx

NATx Amino Acids

Amino acids are traditionally the backbone of parallel chemistry.

Structural heterogeneity and a plethora of amenable synthetic methods permit the creation of a virtually indefinite multitude of diverse libraries. The application of sophisticated methodologies allows for the exploration of structural spaces far beyond traditional **amino acid** and peptide chemistry.

10,945 compounds from our library originating from 47 diverse scaffolds are populating the AnalytiCon **amino acid** like space. All compounds can be cherry picked. Customized sets can be assembled and delivered in your preferred format. All compounds are above 85 percent purity.
